Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Terai (JP0537741) in view of Stavich (2,799,890).

Regarding claim 1, Terai discloses a projection television showing a cabinet hinge (4 or 105), and a screen hinge (1a), except the arcuate slot and arcuate projection features regarding the respective hinges as claimed. Stavich, from the similar field of endeavor, teaches the claimed arcuate slot (30) and the claimed arcuate projection (33), which are known as the interlocking channel and hook, respectively. By employing these mechanisms, Stavich states that the sash frame can be installed readily without any tool or skill (note col. 3, lines 3-12) and a secure interlock is formed. Knowing that the interlocking mechanism in Terai is lesser secure, especially the one shown in Figure 6, and that the installation may require tools, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to modify the its interlocking mechanism with the interlocking mechanism of Stavich so that the screen could be installed without tools while a secure interlocking connection could be formed.

Regarding claims 2 and 3, note Figure 2 in Stavich.

Regarding claim 4, the hooks 32 and 30 in Stavich meet the extrusion feature as claimed.

Regarding claim 5, the interlocking mechanisms are made of aluminum in Stavich.

Regarding claim 6, both Stavich and Terai show the claimed stops. Stavich shows the equivalent stops 26 and 27. And Terai shows the same stops 2 in Figure 3.

Regarding claims 7-12, see the corresponding rejections as set forth above.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shewchuk (4,852,213) shows an arcuate hinge.
